Luria's (1973) brain functioning theory is offered as a model for cognitive psychophysiological research. It may be used to predict brain processing patterns both for constructive tasks of various levels of complexity and for high and low performance on these tasks.

For instance, his model of the three principal functional units of the brain (Luria, 1979) is essential for understanding all types of human mental processes, in addition to the full understanding of conscious activity as expressed in the research of Paul D. MacLean, who introduced the theory of the triune brain (MacLean, 1990).

Luria's neuropsychological and neurolinguistic testing is based on his general theory of brain-behaviour relations, which emphasizes the overlap between different functional systems.

Luria's Neuropsychological and Neurolinguistic Testing

[Luria's concluding remarks] Finally, the neuropsychological approach gives us a new insight into the effects of learning on the brain's processes. There is a well-known story of a patient of the 19th-century English neurologist Sir William Gowers who, after many unsuccessful attempts to repeat the word "no" in response to his instruction, at last burst out: "No, doctor, I can't say 'no.'"

This model was later used as a structure of the Functional Ensemble of Temperament model matching functionality of neurotransmitter systems. The two books together are considered by Homskaya as "among Luria's major works in neuropsychology, most fully reflecting all the aspects (theoretical, clinical, experimental) of this new discipline ...

Luria's three-step test: what is it and what does it tell us?

Based on A. R. Luria's (1966) work on modularization of brain function, and supported by decades of neuroimaging research, the PASS Theory of Intelligence proposes that cognition is organized in three systems and four processes [clarification needed]. The first process is Planning, which involves executive functions responsible for controlling and organizing behavior, selecting and ...

Abstract. The first part of this article examines the theoretical justification for applying Luria's approach in the assessment of children. It is concluded that Luria's concepts of functional systems and the principle of specifying primary and secondary deficits may be applied to children.
