Abstract. We describe an architecture for representing and managing context shifts that supports dynamic data interpretation. This architecture utilizes two layers of learning and three layers of control for adapting and evolving new stochastic models to accurately represent changing and evolving situations.

Managing Dynamic Context to Optimize Smart Interactions using Feedback Loops and SOA Governance Techniques Hausi A. Müller University of Victoria hausu@cs.uvic.ca Abstract With the rapid growth of socio-technical ecosystems, smart interactions and services will proliferate and permeate every walk of life. Smart services are context-aware—are able to detect its current state or context and ...

The role of project management in achieving project success: A K Munns and B F Bjeirmi defining the requirement of work, establishing the extent of work, allocating the resources required, planning the execution of the work, monitoring the progress of the work and adjusting deviations from the plan. Initially these two definitions may appear to overlap. Both are heavily orientated to the ...

### **The role of project management in achieving project success**

Using data on several hundred thousand managers from every industry sector, we have identified 11 personality types likely to have dysfunctional reactions to failure. For example, there is the ...

### **Managing Yourself: Can You Handle Failure?**

The Dynamic Management CSP enables configuration of policies that change how the device is managed in addition to setting the conditions on which the change occurs. This CSP was added in Windows 10, version 1703.
